About This Program

This program prepares graduates for dynamic roles in the field of Instructional Design and Technology in both academic and corporate settings. The MS program offers tracks in Instructional Design and Technology, Artificial Intelligence, Teaching and Learning with Technology, Workforce Learning and Performance, and Project Management in Workforce Performance.

Many courses are offered in traditional (16-week) formats and accelerated (8-week) formats. The accelerated offering is designed for working professionals, provides upward career mobility, and guides students towards a successful future in as little as 14 months. The Learning Technologies MS program also serves as an excellent foundation for continued doctoral studies and professions in various settings, including K-12 schools, higher education, business, and government fields.
